

Experiment 11: Multithreading

C Program

```
#include <stdio.h>
#include <pthread.h>

void *display(void *arg){
    for(int i=1;i<=5;i++) printf("Thread Executing : %d\n",i);
    pthread_exit(NULL);
}

int main(){
    pthread_t t1,t2;
    pthread_create(&t1, NULL, display, NULL);
    pthread_create(&t2, NULL, display, NULL);
    pthread_join(t1, NULL);
    pthread_join(t2, NULL);
    printf("Main Thread Completed.\n");
    return 0;
}
```

Sample Output

```
Thread Executing : 1
Thread Executing : 2
Thread Executing : 3
Thread Executing : 4
Thread Executing : 5
Thread Executing : 1
Thread Executing : 2
Thread Executing : 3
Thread Executing : 4
Thread Executing : 5
Main Thread Completed.
```

Result

The concept of multithreading was successfully implemented using POSIX threads.
