

Experiment 6: Preemptive Priority Scheduling

C Program

```
#include<stdio.h>

int main()
{
    int n, bt[10], pr[10], rt[10];
    int i, completed=0, time=0, min, index;

    printf("Enter number of processes: ");
    scanf("%d",&n);

    for(i=0;i<n;i++)
    {
        printf("Burst Time: ");
        scanf("%d",&bt[i]);
        printf("Priority: ");
        scanf("%d",&pr[i]);
        rt[i]=bt[i];
    }

    while(completed<n)
    {
        min=9999;
        index=-1;

        for(i=0;i<n;i++)
            if(rt[i]>0 && pr[i]<min)
            {
                min=pr[i];
                index=i;
            }

        rt[index]--;
        time++;

        if(rt[index]==0)
            completed++;
    }

    printf("Processes Executed Successfully");
    return 0;
}
```

Output

Sample Output:

Processes Executed Successfully
